DETAILED ACTION

Double Patenting

The examiner notes that two Double Patenting rejection types are shown below:

- a. Non-statutory double patenting – can be overcome by terminal disclaimer.
- b. Double Patenting – cannot be overcome by a terminal disclaimer.

A. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-9 and 17 rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-18 of U.S. Patent No. 6,434,135. Although the conflicting claims are not identical, they are not patentably distinct from each other because both the patent and the application claim similar technical material regarding an adaptive RF amplifier pre-limiter whereby US 6,434,135 discloses generically limiting forward/reverse link transmission power in a CDMA system and the application specifically claims its use within a CDMA Base Station.

Art Unit: 2683

1. Ozluturk US 6,434,135 discloses a generic CDMA cellular system in figure 1 whereby Mobile Stations shown (#22sub 1 thru 22subN) would use the claimed invention.

2. The new application specifically claims use of US 6,434,135 patent in a Mobile Station.

B. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 10-16 rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-17 of prior U.S. Patent No. 6,434,135. This is a double patenting rejection. The examiner notes that independent claim 10 is written more broadly than the claims of US 6,434,135 (eg. claim 10 does not limit itself to any type of cellular communications standard) and therefore reads on the US 6,434,135 claims since they disclose a CDMA standard and one skilled in the art realizes that claims 10-16 would be applicable in any RF/cellular application (eg. such as CDMA, etc.). Hence the examiner puts forth that Ozluturk is entitled to the scope of the US 6,434,135 patent's claims as well as claims 1-9 and 17 from the present application but is not entitled to the scope of claims 10-16.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
